

## Top Quality Vacuum Equipment **SEPTIC VAC**

Built for municipal and industrial service work, this **13 m³ Septic Vac Unit** offers reliable vacuum performance and rugged construction for non-dangerous goods operations.

Engineered for durability and ease of use, it's ideal for septic and wastewater applications where safety, efficiency, and uptime matter most.

At its core, the unit features a **Fruitland RCF 870 rotary vane vacuum pump**, delivering 501 CFM of free air flow and up to 28" Hg of vacuum. The tank is built to withstand full vacuum (14.9 PSI internal/external pressure) and includes a full-opening hydraulic rear door, 3-stage hoist cylinder, and locking top hinge for fast, safe unloading. *Please note: Upgraded models are available with Robuschi RBDV65 and RBDV85 blower systems that can deliver up to 1600CFM. These units are also available in tri drive configuration.*

The plumbing system includes a **6" Betts pneumatically operated discharge valve**, and a **4" brass lever valve** with camlock fittings. All valves are heated for cold-weather reliability, and the system includes primary and secondary shutoffs with an oil catch can near the pump.

Designed for field service, the unit includes a 40-gallon alum hydraulic tank with aluminum fender/hose tray assemblies, a full-width bumper with center tow point, and a steel undermount wash-style cabinet. CMVSS lighting, with LED work lights and rear indicators.

Finished with a two-tone paint job, sandblasted and primed, and equipped with a 20 lb fire extinguisher, ground cable reel, and ladder access, this Septic Vac Unit is built to perform — day in, day out, in any season.
